## **Keyware optimizes payments at Brussels South Charleroi Airport with hybrid payment solution**

**Brussels, Belgium – 17 December 2015 – Keyware (EURONEXT Brussels: KEYW) is announcing the signing of an agreement with Brussels South Charleroi Airport for the delivery of a comprehensive electronic payment solution for the different services at the airport, including those of operator Ryanair. The unique aspect is that costs were reduced substantially by applying a hybrid payment concept.**

Millions of travelers go through Charleroi (Brussels South) Airport every year. The biggest operator is Ryanair. Various payment transactions take place on different levels and locations, from ticket payments and excess baggage charges to purchases at the various retail and catering outlets.

In response to the airport's search for a new payment infrastructure, Keyware was the only supplier who managed to reduce costs substantially whilst maintaining or even improving service levels. In this pursuit, Keyware was able to avail itself of its multi-brand range of payment terminals, allowing for an optimized solution for every point of payment. This way, environments with a high payment frequency are equipped with higher-performance terminals and corresponding service agreements, while other services are provided with standard solutions. This way, Brussels South is managing to cut costs for its payment infrastructure, without any loss of quality or service for travelers.

With these kinds of hybrid and/or redundant payment applications, Keyware distinguishes itself in more complex or high-performance payment environments. By optimizing the mix of payment terminal types and brands, Keyware ensures costs are reduced and efficiency is improved, while the possibility of working with a multi-acquirer approach provides additional operational security and better rate plans.
