### Delivery of a Hercules 20 in South Africa

---

Villepinte, October 29, 2018

**DRONE VOLT, a French aeronautics manufacturer specializing in professional civilian drones, has announced the first delivery of its HERCULES 20 heavy-lift drone in South Africa, only a few days after the announcement of its entry into this market.**

The Hercules 20, an impressive heavy-lift drone with payload capacity over 20 kg, horizontal speed over 50 km/h and a high degree of stability, rounds out the group's range of solutions.

After the Hercules 10 and the Altura Zenith, which have seen their sales more than double over the last nine months, the Hercules 20 represents a future growth driver for the group by offering customers increased possibilities for spraying missions and the transporting of material in sensitive sites or risky theaters of operation.

Following 18 months of R&D and flight testing involving a significant total investment, the Hercules 20 should make a significant contribution to Factory segment sales starting in 2019.

Olivier Gualdoni, the chairman / CEO of DRONE VOLT confirms that "industrials and government agencies are increasingly interested in this solution, which offers the possibility of heavy lifting and dispersion or spraying in difficult to access or dangerous zones. Additionally, the Hercules 20 is enabling DRONE VOLT to enter into new, highly promising markets in the agriculture area".
