

La Nueva España, the leading regional newspaper for Asturias, has published an article on Mining in Spain. The article comments on several pre-development projects in Asturias, and focuses on the importance of Spanish mining to the technology sector.

The mining of strategic elements

An industrial sector with a future in the 21st century

JOSÉ ANTONIO SÁENZ DE SANTAMARÍA BENEDET PABLO NÚÑEZ FERNÁNDEZ |

Commenting on Salave and referring to the El Valle gold mine 40km from Salave, the article stated:

“.....administrative and environmental considerations that are not understood [by the local community] and are surmountable. The underground mine will not damage the surface and, in an area with low economic activity, about 1,000 direct jobs for 10 or 15 years will be devoted to extracting much-needed gold for technological development (each mobile phone contains 30 milligrams in its connections). It will be said that this mine is harmful to the environment. Our response is to visit the restoration of the Boinás Gold Mine in Belmonte where they have been working for 20 years without any problem.”

At Black Dragon we have been busy preparing the platforms for effective communication with our local stakeholders. As we seek to permit the Salave project, our message will seek to inform those stakeholders, emphasising the benefits of our project to our local community in terms of economics, social cohesion and environmental benefits.

ABOUT BLACK DRAGON GOLD

Black Dragon Gold “BDG” is the 100% owner of one of the largest undeveloped gold projects in Europe, the Salave project. Salave is situated in the North of Spain in the province of Asturias. The Salave project has an updated combined Measured and Indicated Mineral Resource of 8.21 million tonnes grading 4.58 g/t Au, containing 1.21 million ounces of gold, plus Inferred resources totalling 3.12 million tonnes grading 3.47 g/t Au, containing 348,000 ounces of gold.

A full technical report summarizing the Mineral Resource estimate completed by CSA Global is in progress and will be completed and posted on SEDAR and the Company’s website within 45 days. In addition to the current Mineral Resource, historical exploration work suggests there is the potential for additional mineralization within Black Dragon’s landholdings.
