

Shareholder Update

Final Clearance for Indian Project Agreement Received

Monday, 14 December 2015: Environmental Clean Technologies Limited (ASX: ESI) (ECT or Company) is pleased to advise it has been informed by Indian development partner, NMDC that it has received clearance from the Ministry of Steel to sign the tripartite collaboration agreement with ECT and Neyveli Lignite Corporation (NLC).

The parties are currently working to confirm scheduling of key personnel for the signing ceremony, to be held in India, at the earliest mutual availability.

The Company looks forward to providing further updates following the signing of the agreement.

About ECT

ECT is in the business of commercialising leading-edge coal and iron making technologies, which are capable of delivering financial and environmental benefits.

We are focused on advancing a portfolio of technologies, which have significant market potential globally.

ECT's business plan is to pragmatically commercialise these technologies and secure sustainable, profitable income streams through licencing and other commercial mechanisms.

About Coldry

When applied to lignite and some sub-bituminous coals, the relatively simple Coldry beneficiation process produces a black coal equivalent (BCE) in the form of pellets. Coldry pellets have equal or superior energy value to many black coals and produce lower CO₂ emissions than raw lignite.

About MATMOR

The MATMOR process has the potential to revolutionise primary iron making.

MATMOR is a simple, low cost, low emission, production technology, utilising the patented MATMOR retort, which enables the use of cheaper feedstocks to produce primary iron.
